

Protegent Antivirus Plus

“Think Beyond Anti-Virus, Think Protegent”

Protegent is deciphered from French Word “Protégée”, which means “TO PROTECT”. As the name suggests Protegent products have been designed to protect your Business, child, data and computer/Laptop.

Unistal has developed advanced amenities that seemingly discards all unwanted/unknown virus threats and make your PC Virus Free!! Protegent Antivirus safeguard your PC from all kind malwares

Antivirus

Protegent has been infused with Next Generation Technology which helps to detect new threats based on files/Data and URL reputation. Automatic processing of unknown suspicious samples is done at our Protegent™ cloud system after these samples are collected. If a sample is found malicious, automated signatures are generated and immediately rolled out. This blocks unknown threats before they impact your pc and improves the overall efficiency to detect.

Key Features

- Smart Code Emulations
- USB Threat Protection
- Zero day Malicious URL Protection
- Anti -Ads Protection
- Anti-Phishing Protection

Benefits

- Protection against Adware/PUP (Potentially Unwanted Programs)
- Low Foot Prints
- Speed up your PC

Descriptions

| | |
|--|---|
| Smart Code Emulations | <p>Protegent strength lies in proactive detection of known and unknown threats by means of complex definitions of malicious behavior by using Smart Code Emulation signatures & neural networks. A single signature can detect and block thousands of known and unknown threats before they emerge. There entire process is done without any impact on your system resource.</p> |
| Anti-Ads Protection | <p>With Protegent anti-ads protection, most of the Ads are blocked and removed before data is downloaded to your computer. This helps to increase faster uploading & downloading and thereby saving your bandwidth.</p> |
| USB Threat Protection | <p>Protegent malware team has implemented Neural Smart Scan which protects system from unknown USB threats. When a USB is infected with malware, it usually creates short cuts and hides the data inside it. Protegent has adapted to a different and advanced approach to clean such infected USB drives.</p> |
| Web Control | <p>Protects against online risks and blocks Internet clutter.</p> |
| Zero day Malicious URL Protection | <p>Malicious URL Protection provides another layer of protection against command and control, botnet's and suspicious links. If any malicious URL communication is detected, the communication is aborted and a warning block message "blocked" is displayed to the user.</p> |
| Anti Phishing Protection | <p>Protegent encourages online shopping and provides protection against fake phishing sites. Protegent anti-phishing adds one more layer of protection. When a user's computer attempts to access a URL, it will be compared against DenySense.net system of known phishing sites. If the fake URL is found, connection to the URL is aborted and a warning message "blocked" is displayed. Our database contains millions of phishing websites and is regularly updated. With Protegent™ you are protected from scams with more comfortable and safer online shopping.</p> |

| | |
|--|---|
| Speed Up Your PC | Forget system slowdown situations with bloat ware products. With Protegent™ Speed always Thrills! We build what you always need, very light on your system resources and you don't even notice it's running in the background & protecting you. |
| Low Foot Prints | Newly created signatures are packed together and regularly released to our users in the form of a Threat Signature Foot Print DB Update. These updates are rolled out on an hourly basis, 24-7-365 days which keep Protegent up-to-date. |
| Protection against Adware/PUP (Potentially Unwanted Programs) | Protegent take down all Adware/PUP's which overloads your pc and compromise your privacy. Protegent Threat Research team is continuously tracks growing numbers of Adware/PUP's. There are several types of signature definitions to detect the outnumbered Adware/PUP's which uses our built in technology of Smart Code Emulations and other sources like sample exchange or active honey pots. |
| Hourly update | Protegent Antivirus software is updated every hour and protects our system from new viruses. |
| Setting Protection | Protects your Protegent settings with a password, so that no one can change or modify the settings even if the other user has the admin rights. |
| Active Optimization | Maximize operating performance & initiates high speed of analysis and spontaneous response to the attackers. |

System Requirements

Processors

Intel or AMD x32 or x64

Supported Operating Systems

Windows XP (SP 3), Vista , Windows 7, Windows 8, 8.1 & 10

Net Framework 2.0

Required for Network Update server

Memory Consumption

40 MB

Free Disk Space

120 MB
